Louvres

Sheet 6.6.0.2 -1 - Version 12/12/2022

Louvres will be a prefabricated system consisting of louvres blades complete with suitable supports. The louvre design is optimised by considering the pressure drop and air flow. The louvre blades are of a profiled type and fixed by bolting to the vertical aluminium or stainless steel brackets. Materials for louvres blades are pre-coated galvanised steel or stainless steel.

Framed louvres

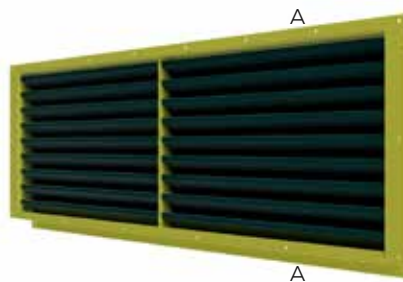

Framing for louvres is complete with louvre blades pre-installed. Material for framing 2.0 mm stainless steel framing (no further surface treatment). Material for louvre blades 0.75 mm galvanised steel HPS Plastisol coated in standard RAL color.

Framing for louvres is complete with louvre blades installed. Material for framing 2.0 mm stainless steel framing (no further surface treatment). Material for louvre blades 0.8 mm stainless steel 316L (alternative).
